

FOR ANY COMPETITION WITH JUDGES AND A PODIUM

Scoring, without the paperwork.

Judges mark on their own phones. Totals, shortlists and the final rankings work themselves out, so nobody is adding up columns backstage while an audience waits.

1–10

judges, marking at the same time

Any

number of rounds and contestants

0

sums to do by hand, ever

The problem it solves

Scoring on paper is fine right up until the last ten minutes. Someone collects the sheets. Someone else adds them twice because the first answer looked wrong. A judge's seven might be a one. The host is filling, the audience is restless, and the person with the calculator is the most stressed individual in the building.

Then a contestant asks why they placed fourth, and the honest answer is that the sheets are in a folder somewhere and nobody wants to go through them in front of a crowd.

Three steps, one evening

01 Set it up beforehand

Your rounds, your categories, marks out of whatever number suits. Add entrants with photos and numbers, then invite judges by link or QR code. Twenty minutes, done the week before.

02 Judges mark on the night

Big thumb-sized controls, one entrant at a time, and a row of numbers to jump straight to whoever walks on next. Every mark saves as it is tapped.

03 Results appear

Shortlists calculate themselves between rounds, ready to read out. At the end, a podium for the projector and a printable record of every mark.

Who it is for

Nothing assumes what you are judging. You define the rounds and what gets marked, so the same tool handles a dog show and a debating final.

Talent shows • Fashion shows • Dance competitions • Spelling bees • Pet and livestock shows • Bake-offs • Quiz finals • Sports heats • Pageants • Science fairs • Music festivals

The bits that catch people out

A judge’s phone dies Close the round without them and carry on. Their marks up to that point still count and the panel is not left waiting.	The wifi drops Marks are held on the judge’s device and sent when the signal returns. They keep scoring and never notice.	Nobody sees the leaderboard Judges mark blind. No anchoring on somebody else’s score, no awkward glances along the table.
Two entrants tie A private panel vote settles it, with the head judge deciding a split. The method is printed on the results so it can be explained.	Someone disputes a placing Every mark is timestamped and attributed. Export the record and the conversation is about the marks, not the arithmetic.	Judges are not technical They tap a link, type four digits, and see one entrant with big plus and minus buttons. There is nothing else on the screen.

What the judge sees

On the screen	What it does
Numbers along the top	Every contestant in the round. Tap one to jump to them when they walk on.
Minus and plus	Move the mark by half a point. Thumb-sized, no keyboard.
The slider	Drag for a bigger jump. Same thing, faster.
Your total	Running total for this contestant, with a saved indicator beside it.
Comment box	Optional note, or required if the organiser asks for one.
Review	Every contestant and every mark before anything is committed.

Your data

Stored in Ireland Everything sits in the European Economic Area. No international transfer, no extra paperwork.	Photos never public Contestant photographs are held privately and shown only through short-lived links that expire.	Deleted on a schedule Event data is removed automatically after your event. Data nobody holds cannot be leaked.
---	---	---

We do not read your event data. The administrative tools have no access to event names, contestants or scores, and the database itself refuses those requests. It is a technical boundary, not a promise.

Getting started

Accounts are set up by hand rather than by signup form, so everything is sized to your competition and ready before the night. Tell us roughly what you are running, how many entrants and judges, and how many rounds.
