

Judging with EventScore

How to score an event on your phone, from the invitation to the final result.

- No app to install
- Everything saves as you tap
- Works even when the venue wifi drops

The whole thing in four sentences. Open the link the organiser sent you and type your four-digit PIN. Score each contestant with the plus and minus buttons. When you have seen everyone, tap Review and check the numbers. Tap Submit round.

Before the event

What you will be sent

The organiser sends two things, usually separately. A **personal link** or a QR code, and a **four-digit PIN**. Neither works alone, which is deliberate: if somebody sees your screen they still cannot sign in as you.

Getting ready

A few minutes spent before the room fills saves trouble later.

- Open your link and sign in before the audience arrives, while the network is quiet.
- Turn the screen brightness up. Venues are dark and the screen dims to save battery.
- Turn auto-lock off if you can find it, so the screen does not sleep between contestants.
- Charge the phone. An evening of scoring on full brightness uses more than you expect.
- If the venue wifi is poor where you are sitting, mention it now rather than mid-round.

Signing in

- 1 Open your link,** or scan the QR code with your camera. It is yours alone, so do not forward it.
- 2 Check it is you.** Your name and photograph appear on the screen. If it shows somebody else, stop and tell the organiser.

3 Type your PIN. Four digits. The scorecard opens straight away.

If the link will not open. Go to the address the organiser gives you and choose the judge option. You will need the **event code**, a six-character code shown on a screen or read out, plus your usual PIN. If neither works, only the organiser can help. Eight wrong PIN attempts locks you out for fifteen minutes.

The scorecard

One contestant fills the screen. Everything else is out of the way on purpose.

What you see	What it does
A row of numbers across the top	Every contestant in this round, by entry number. The one you are on is highlighted. Tap any number to jump straight there.
Photograph, entry number, name	Who you are marking. A short description appears if the organiser added one.
Your total	Running total for this contestant out of the maximum available. A small badge beside it tells you whether your marks have reached the server.
Minus and plus buttons	Move the mark down or up by half a point. Large on purpose so they work in the dark.
The slider	Drag for a bigger jump. Exactly the same as the buttons, just faster.
Comment box	Optional, unless the organiser has asked for a comment on everyone. Your note goes on the results.
Back and Next	Move between contestants. On the last one, Next becomes Review.

How marking works

Each category is scored out of a number the organiser chose. Marks move in half points, so 7.5 is available if you want it.

Anything you do not touch counts as zero. Nothing forces you to move every slider, and the app will let you submit either way. If you meant to give zero, that is correct behaviour. If you skipped a contestant by accident, they go in on nothing. The review screen exists to catch this.

Jumping around

Contestants rarely appear in order on the night. When entry number 17 walks on unexpectedly, tap 17 in the row along the top. You do not have to page through sixteen others to get there, and you can go back and change anything until you submit.

Knowing your marks are safe

The badge says	What it means
Saving	On its way to the server. Normal, and usually gone in under a second.
Saved	Confirmed. Safe even if your phone dies this second.
Waiting, or a number	No connection. Marks are held on your phone and will send themselves when the signal returns. Keep scoring.
Retrying	Something failed. It is trying again on its own, with longer gaps each time.

When the wifi drops

An amber banner appears at the top saying there is no connection. **Keep marking.** Everything is stored on your phone and sent the moment the signal comes back, usually within a second of it returning.

The badge shows how many marks are waiting. When it turns green and says Saved, everything has landed.

Do not close the browser while marks are waiting. The phone will warn you if you try. Marks held on the device are safe through a screen lock or switching apps, but closing the tab entirely is asking for trouble.

Reviewing and submitting

- 1 On the last contestant, the **Next** button becomes **Review**. Tap it.
- 2 You see every contestant with the marks you gave and their totals. Read down the list.
- 3 Anything wrong? Tap that contestant to go straight back to their scorecard and change it.
- 4 If a warning says you never opened some contestants, go back and check. They will submit as zero.
- 5 Tap **Submit round**. Your marks lock at that moment and cannot be changed.

Submitting is final. There is no undo. If you spot a mistake afterwards, tell the organiser immediately, before the round closes, and they may be able to help.

Waiting for the others

After submitting, your screen shows who has not finished yet and updates on its own. Nobody moves to the next round until every judge is in, so the shortlist is always worked out from the whole panel.

If you are the only judge, it goes through straight away.

Between rounds

When everyone has submitted, tap **Continue**. You see the list of who is through to the next round, which is often read out at this point. Tap **Begin** and the new scorecard opens with only those contestants.

Ties

If two contestants finish exactly level at a place that changes the outcome, you will be asked to choose between them before results appear.

You see both side by side with photographs and entry numbers, and **no scores**. That is deliberate: the choice should be about the performance, not the arithmetic. Tap one, confirm, and your vote is cast. It is private and cannot be changed.

Panel size	How the tie is settled
One judge	Your choice decides it outright.
Two judges	If you both pick the same contestant, done. If you disagree, the head judge's choice wins.
Three or more	Majority wins. If the majority is itself tied, the head judge decides.

The head judge is whoever the organiser placed first on the panel. However a tie is settled, the reason is printed on the results, so it can be explained to anyone who asks.

When something goes wrong

What happened	What to do
Your session expired	Open your link again and enter your PIN. Everything you had saved is still there.
A mark does not seem to have saved	Look at the badge beside Your total. If it says Retrying or shows a number waiting, it is working on it. If it stays red, change the mark again.
Wrong PIN too many times	Eight failures locks it for fifteen minutes. Ask the organiser to read your PIN out.
You submitted with a mistake	You cannot change it. Tell the organiser at once, before the round closes.
Your phone died	Marks that showed as Saved are on the server, not the phone. Sign in on another device with the same link and PIN and carry on.
The screen is stuck	Reload the page. Saved marks come back. Anything queued on that device is lost, so re-check the last contestant you were on.
You cannot find your link	Use the event code and PIN route, or ask the organiser to resend it.

Your information

Your name, photograph, the marks you give and any comments you write are stored and visible to the organiser running the event. Marks contribute to contestant totals and appear in the results.

The organiser is responsible for that information, so any question about it goes to them rather than to EventScore. Data is stored in Ireland and deleted automatically after the event.
