

Running EventScore

Accounts, recovery, backups, costs and the things that break.

- Everything is done from the app, not from Supabase
- Keep this where you can reach it when locked out
- Read the recovery section before you turn on two-factor

The one genuinely unrecoverable state. If you turn on two-factor and lose your phone, with no recovery codes and no second owner account, nobody can let you back in. Create a second owner account today. It takes two minutes and it is the only real insurance.

Where everything lives

Address	What it is
/	The public site. Homepage and contact form.
/contact	The enquiry form. Messages land in your console.
/login	Sign in. The same door for you and for customers.
/backstage	Your console. Only reachable by owner accounts.
/backstage/enquiries	Messages from the contact form.
/backstage/acceptances	Which customer accepted which terms, and when.
/security	Your own password, two-factor and recovery codes.
/login/recovery	Getting back in with a recovery code.
/judge	Judge sign-in by event code and PIN.
/terms, /privacy, /dpa	The legal documents, public.

Accounts

Creating a customer

- 1 Open **/backstage** and tap **Add customer**.
- 2 Email, organisation name, and the limits you are giving them.
- 3 Choose **Customer** unless you are deliberately creating another owner.
- 4 A temporary password appears **once**. Copy it before closing the panel.
- 5 Send them the password and ask them to change it in Security after signing in.

There is no public signup, which is deliberate. It means nobody creates an account without you knowing, and access control stays entirely in your hands.

What each control does

Control	Effect
Full	Normal. They can create and edit everything within their limits.
Read only	They can see their events but change nothing. Judges can still score, which makes this useful mid-event.
Disabled	They cannot sign in at all.
Reset password	Issues a new temporary password, shown once. Recorded in the audit log.
Clear 2FA	Removes their two-factor when they have lost their phone and used their codes.
Edit details	Change their email or organisation name. The email change applies to sign-in too.
Owner / Customer	Promote or demote. An owner can do everything you can, including demoting you.
Delete	Soft delete. Thirty days in Archive, then permanently purged.
Limits	How many events, contestants per event and judges per event they may create.

The last owner cannot be demoted. The system refuses, because otherwise nobody could manage accounts and the only way back would be the Supabase dashboard. There is no seniority between owners: whoever you promote can demote you.

Recovery

A customer is locked out

Check it is really them first. Their **backup email** is shown on their card in backstage for exactly this purpose. Then **Reset password**, or **Clear 2FA** if the problem is their authenticator app.

You are locked out

Situation	Way back in
Forgot your password	Another owner resets it for you from backstage.
Lost your authenticator, have recovery codes	Go to /login/recovery. Email, password, one code. Two-factor switches off so you can set it up again on a new device.
Lost your authenticator, no codes, another owner exists	Ask them to Clear 2FA on your account.
Lost everything, no second owner	Supabase dashboard, Authentication, reset the password there. This is the only path left, and it needs your Supabase login.

Setting yourself up properly

- 1 Create a second owner account, even if it is a second email address of your own.
- 2 Turn on two-factor at **/security**.
- 3 **Immediately** generate and download your recovery codes.
- 4 Store the codes somewhere that is not the phone running your authenticator.
- 5 Save the authenticator secret in a password manager as well, so you can restore it on a new device.

A judge cannot get in

What they say	What it usually is
The link does nothing	They have an old link. Send the current one from the Judges page.
It says the invitation is no longer valid	The judge was removed, or the link belongs to a deleted event.
Wrong PIN	The PIN is on the Judges page beside their name. Read it out.
It locked me out	Eight failed attempts locks it for fifteen minutes. Nothing to do but wait.
I have no link at all	They can use /judge with the six-character event code plus their PIN.
It shows the wrong name	They opened somebody else's link. Send them their own.

Backups

A GitHub Actions workflow dumps the database nightly at three in the morning and commits it into the **backups/** folder in the repository, keeping thirty days. Two files per night: the structure and the data.

Checking it is working

Open the repository and look at **backups/**. The data file should be noticeably larger than the schema file. If the data file is missing or tiny, the backup is capturing structure without rows, which looks like insurance and is not.

Restoring

- 1 Download the two files for the date you want.
- 2 Unzip them: `gunzip schema-DATE.sql.gz data-DATE.sql.gz`
- 3 Schema first: `psql "POOLER_URL" -f schema-DATE.sql`
- 4 Then data: `psql "POOLER_URL" -f data-DATE.sql`
- 5 Open the app and check an event, its rounds and its contestants.

Photographs are not in the backup. They live in Supabase storage and a database dump does not touch them. Download the event-media bucket occasionally and keep it alongside. Without it, restored data points at photographs that no longer exist.

The plumbing

Piece	Where	What it does
App	Vercel	Redeploys on every push to main. Function region should be Dublin.
Database	Supabase, Ireland	Postgres, logins and file storage.
Photographs	Supabase storage	Private bucket. Served only through short-lived signed links.
Domain	GoDaddy DNS	A CNAME record pointing at Vercel.
Maintenance	GitHub Actions	Every two days: keeps Supabase awake and purges expired events.
Backups	GitHub Actions	Nightly database dump committed to the repository.

The Supabase free tier sleeps after seven days of no activity. The maintenance workflow prevents that. If you go quiet on the project for two months, GitHub disables scheduled workflows and it stops. Check the Actions tab before any real event after a long gap.

Costs

Item	Now	Once you charge
Hosting	Free on Vercel Hobby	Hobby is licensed for non-commercial use only. Move to Netlify Free, which permits commercial use, or Vercel Pro at about 20 dollars a month.
Database	Free	Free still works. Pro at about 25 dollars a month adds daily backups and point-in-time recovery.
Domain	Yearly renewal	Unchanged.

Put a reminder in your calendar for the day you first invoice somebody. That is the moment the hosting terms change, not the moment you get busy.

Legal

Your customers are data controllers; you are their processor. That relationship is governed by the Data Processing Agreement they accept at setup, and the acceptance record is in backstage with the document version and timestamp.

What is outstanding

Item	Why it matters
Business details are placeholders	The legal documents name an entity that does not exist, which makes them unenforceable. This matters the moment somebody else runs a real event, not the moment money changes hands.
No solicitor review	The liability cap, the indemnity and the processing agreement are the three places where a mistake costs real money.
Sole trader or company	As a sole trader, a successful claim comes out of your own bank account. A limited company absorbs it instead. Worth an accountant's hour.
A service address	You do not need to publish your home address. A registered office service costs around a hundred euro a year.

Bump the document version when you change the legal text. It is in `src/lib/legal.ts`. Changing it forces every customer to accept again, and the acceptance record stores which version they agreed to, which is the whole point of keeping it.
