

WHEN SOMETHING GOES WRONG

Fixing EventScore

Plain instructions for common problems. No technical knowledge assumed.

- Find your problem in the list
- Follow the steps in order
- Most things are fixed in under a minute

Try this first, whatever the problem. Reload the page. Then close the browser tab and open it again. Then try a different browser. These three fix most things and take under a minute.

Find your problem

If this is happening	Go to
A judge cannot get into the app	Judges cannot sign in
A judge's marks are not saving	Marks and connection
The wifi has gone	Marks and connection
The round will not move on	Rounds and progression
The results look wrong	Results and scores
You cannot sign in yourself	Getting yourself back in
A page will not load at all	The app itself
Something else entirely	Last resort

Judges cannot sign in

Their link does nothing

- 1 Check they are using the link you sent for **this** event, not an old one.

- 2 Ask them to copy the link and paste it into the browser rather than tapping it in a messaging app. Some apps mangle links.
- 3 Send them the link again from the Judges page in your account.
- 4 If it still fails, use the backup route: the six-character **event code** from your Judges page, plus their PIN.

It says the invitation is no longer valid

That judge has been removed from the event, or the link belongs to a different event. Check the Judges page. If they are not listed, add them again and send the new link.

Their PIN is not accepted

- 1 Open your Judges page. The PIN is shown beside each judge's name.
- 2 Read it out to them digit by digit.
- 3 If they have already tried many times, they are locked out for fifteen minutes. There is nothing to do but wait.

It shows the wrong person's name

They have opened somebody else's link. Send them their own. Do not let them continue: their marks would be recorded under the wrong judge.

The event code is your safety net. Write it down before the night. It is on the Judges page in a green panel, six characters. With that and a PIN, any judge can get in from any device without needing their link at all.

Marks and connection

How to tell if marks are saving

On the judge's screen, beside **Your total**, there is a small badge. It is the single most useful thing on the page.

The badge says	What it means	What to do
Nothing at all	Everything is saved and quiet.	Nothing.
Saving	On its way.	Nothing. It usually disappears within a second.
Saved, in green	Confirmed on the server.	Nothing. Safe even if the phone dies now.
A number, in amber	No connection. That many marks are waiting on the phone.	Keep marking. They send themselves when the signal returns.
Retrying, in red	A send failed. It is trying again on its own.	Wait thirty seconds. If it stays red, see below.

The wifi has gone

An amber banner appears at the top of the judge's screen. **Tell them to keep marking.** Everything is stored on their phone and sent the moment the signal returns.

- 1 Ask judges to carry on. This is designed for and nothing is lost.
- 2 Try switching one judge to mobile data. Often the venue network is the problem rather than the signal.
- 3 If it has not returned within a few minutes, move to paper for the rest of the round.
- 4 Do not close any judge's browser while their badge shows marks waiting.

Do not let anyone close the tab while marks are waiting. The phone will warn them if they try. Locking the screen or switching apps is fine; closing the tab entirely is not.

A judge says a mark did not save

- 1 Ask them what the badge says. That answers it immediately.
- 2 If it says Retrying and stays red, ask them to change the mark again by one step and back.
- 3 If nothing works, note the mark on paper and enter it afterwards.

Rounds and progression

The round will not move on

This is almost always one judge who has not submitted. Open **Run the event** on your event page. It names everyone who has finished and everyone who has not.

- 1 Find the judge who has not submitted and ask them to tap Review, then Submit round.
- 2 A common cause is that they think they have finished but have not tapped Submit.
- 3 If they genuinely cannot finish, use **Judge cannot finish** on the live console.

Judge cannot finish is a last resort. It closes the round without them and their partial marks do not count. Use it if a phone has died or somebody has left, not because somebody is slow.

The next round has the wrong contestants

The shortlist is worked out from the marks given. If it looks wrong, check on the live console how many judges the standings are based on. Standings only count judges who have submitted.

Remember that any contestant a judge never opened counts as zero for that judge, which pulls their average down.

A judge is stuck on a waiting screen

That is normal. Nobody moves on until every judge submits. The screen updates on its own every ten seconds, so there is nothing to tap. Check the live console to see who everyone is waiting for.

Results and scores

The results look wrong

- 1 Open the live console and check how many judges are counted. If it says two of three, one judge has not submitted and their marks are not in yet.
- 2 Check whether any judge skipped contestants. Untouched contestants count as zero.
- 3 Open the results page and look at the per-round columns. A dash means that contestant was not in that round.

Two contestants have the same score

If it matters for a place, the judges are asked to vote and you will see it happening on the live console. If it does not affect who wins or who advances, it is left alone and ordered by entry number.

The export button does nothing

It opens a printable page rather than downloading a file. Use your browser's Print, then choose Save as PDF as the destination. On a Mac that is in the bottom-left of the print dialog.

Getting yourself back in

You have forgotten your password

If there is another owner account, ask them to reset it for you from backstage. If you are the only owner, you will need your Supabase login: Authentication, Users, find yourself, reset the password there.

You have lost the phone with your two-factor app

- 1 Go to `/login/recovery`.
- 2 Enter your email, your password, and one of the recovery codes you saved.
- 3 Two-factor switches off so you can set it up again on the new phone.
- 4 Do that immediately, and download a fresh set of codes.

If you have no recovery codes and no second owner, you are locked out permanently. Nobody can help. This is why the owner guide says to create a second owner account and download your codes on day one.

A customer cannot sign in

- 1 Check who they are. Their backup email is on their card in backstage.
- 2 Use **Reset password** and send them the new temporary one.
- 3 If they have lost their two-factor device, use **Clear 2FA** as well.
- 4 Check their access is not set to Disabled.

The app itself

A page will not load

- 1 Reload the page.
- 2 Close the tab and open the address again.
- 3 Try a different browser.
- 4 Try a different device or network, to see whether it is the app or the connection.
- 5 Check whether other websites work. If nothing does, it is your connection.

Everything is very slow

Check whether it is slow for everyone or one person. If it is one person, it is their connection. If it is everyone, close any judge tabs that have been left open on old rounds and reload.

The database has gone to sleep

If the app has not been used for over a week, the database may have paused. The first page load wakes it and takes about thirty seconds. Load the site the day before any event so this never happens when it matters.

Last resort

If nothing here helps and an event is running, fall back to paper. Marks already showing as Saved are on the server and nothing before the problem is lost. You can enter the paper marks afterwards.

When you report a problem, these details make it solvable rather than a guessing game:

- What you were doing, step by step, right before it happened
- The exact wording of any message on screen
- A photograph or screenshot of the screen
- Which browser and device
- Whether it happens every time or just once
- Whether it happens for everyone or one person

Screenshots are worth more than descriptions. Most of the hard problems in this system were diagnosed from a single screenshot showing something the description had left out.
